

FREIGHT TRANSPORTATION SERVICE

Remote access and sharing among multiple transportation hubs with distributed administration

Who

- North American freight transportation company with multiple logistics centers and several discrete computer systems.

Need

- The ability to access and share files between multiple logistics centers and between several completely different IT infrastructures
- Each logistics center needs to be able to control administration for their users outside of centralized IT

Fileflex Enterprise: Meeting the Need

- Provides ability to access and share documents between distribution and logistics centers
- Provides the ability for each logistics center for administration via their local IT departments
- Provides the transportation company zero trust data access processes and robust security over-sharing.
- Provides the transportation company an activity log for all remote access and sharing activities.
